ITS Department Important Measures: First Half of 2022

Real-Time Dashboard for Information Services

The real-time dashboard for information services will be launched on January 1, 2022. This service provides various information, including network and Wi-Fi traffic, VPN usage, as well as information on @gate e-mail usage and total amount of spam e-mails. The above services can only be viewed using a Campus IP.

E-forms for @gate Business E-mail Accounts

Starting on January 3, 2022, applications for @gate business e-mail accounts must be done online through the AS e-Form System. Additionally, according to e-mail service policy, @gate business e-mail accounts will be set to expire in one year. Users can apply for renewal after receiving an expiration notice.

Revision of Administrative Service Login Page

To strengthen Administrative Service system security (https://sso.sinica.edu.tw), as of January 3 the login page will be modified and authentication protection mechanisms added.

Advice on Official Announcement E-mails

Advice on official announcement e-mails will be published in the first half of 2022. To enhance e-mail identification and reduce security risks, AS units are advised to adjust the format of their official announcement e-mails accordingly.

New Computing Services: Resource Integration

Our new computing services will integrate HPC, OpenStack, and GPU. Users can log in using their SSO accounts and allocate computing resources within the usage quota. This new service will be launched in two stages: the first stage will begin on August 1, 2022, providing computing services such as HPC and GPU. The second stage will start on July 1, 2023, providing OpenStack computing service.
