Important IT Service Measures in Academia Sinica 2026, Second Half

Phased Migration of Gate Business Email Accounts to GWS

Starting in August 2026, Gate business email accounts will be gradually migrated to Google Workspace (GWS). In addition to email services, users will also be able to take advantage of GWS collaboration features to enhance the effectiveness of business account usage. To facilitate the email migration, the Department of Information Technology Services will provide a migration tool for account administrators to transfer email from Mail2000 to GWS. Application procedures and usage guidelines will be announced separately.
The original Mail2000 email service will be discontinued on October 31, 2026. Users are advised to back up and migrate their email, contacts, and other related data before the service termination date.

Personal Web Page Service Transformation

To provide a more user-friendly experience for creating and managing static websites, the Personal Web Page Service (idv.sinica.edu.tw) has been transitioned to Google Sites. Professional users who prefer to build and maintain their own HTML websites may apply for the web hosting service provided by the Department of Information Technology Services.
The original Personal Web Page Service (idv.sinica.edu.tw) will be terminated on September 30, 2026. Users are advised to complete website backup and migration tasks in advance.

High-Performance Computing Resource Application and Review Process

Starting in September 2026, Academia Sinica will provide high-performance computing resources powered by NVIDIA B200 GPUs. To ensure the effective allocation and utilization of these resources, applications for high-performance computing projects will be reviewed by the Computing Service Management Committee. Eligibility requirements, review procedures, and usage regulations will be announced separately.

New Management Policy for Information Security Training and Social Engineering Exercises

Starting in December 2026, users who have not completed the annual information security training requirements, or who fail the social engineering exercise and do not complete the required follow-up training, will be suspended from using certain IT services if the requirements remain incomplete after notification. Affected services include the AS_Secure Wi-Fi service, AI Assistant, AI Transcript Service, and AI API Service. Access will be restored upon completion of the required training.
