Important IT Service Measures in Academia Sinica 2024 Second Half

EIP New Employee Portal Launched

In August of 2024, Academia Sinica will launch the new Employee Information Portal (EIP) to replace the existing internal administrative service system (https://sso.sinica.edu.tw). The EIP offers personalized links to frequently used and popular systems. AS colleagues will have quick access to various systems for the information they need, thereby improving work efficiency.

ASCS Expands GPU Cloud Resources

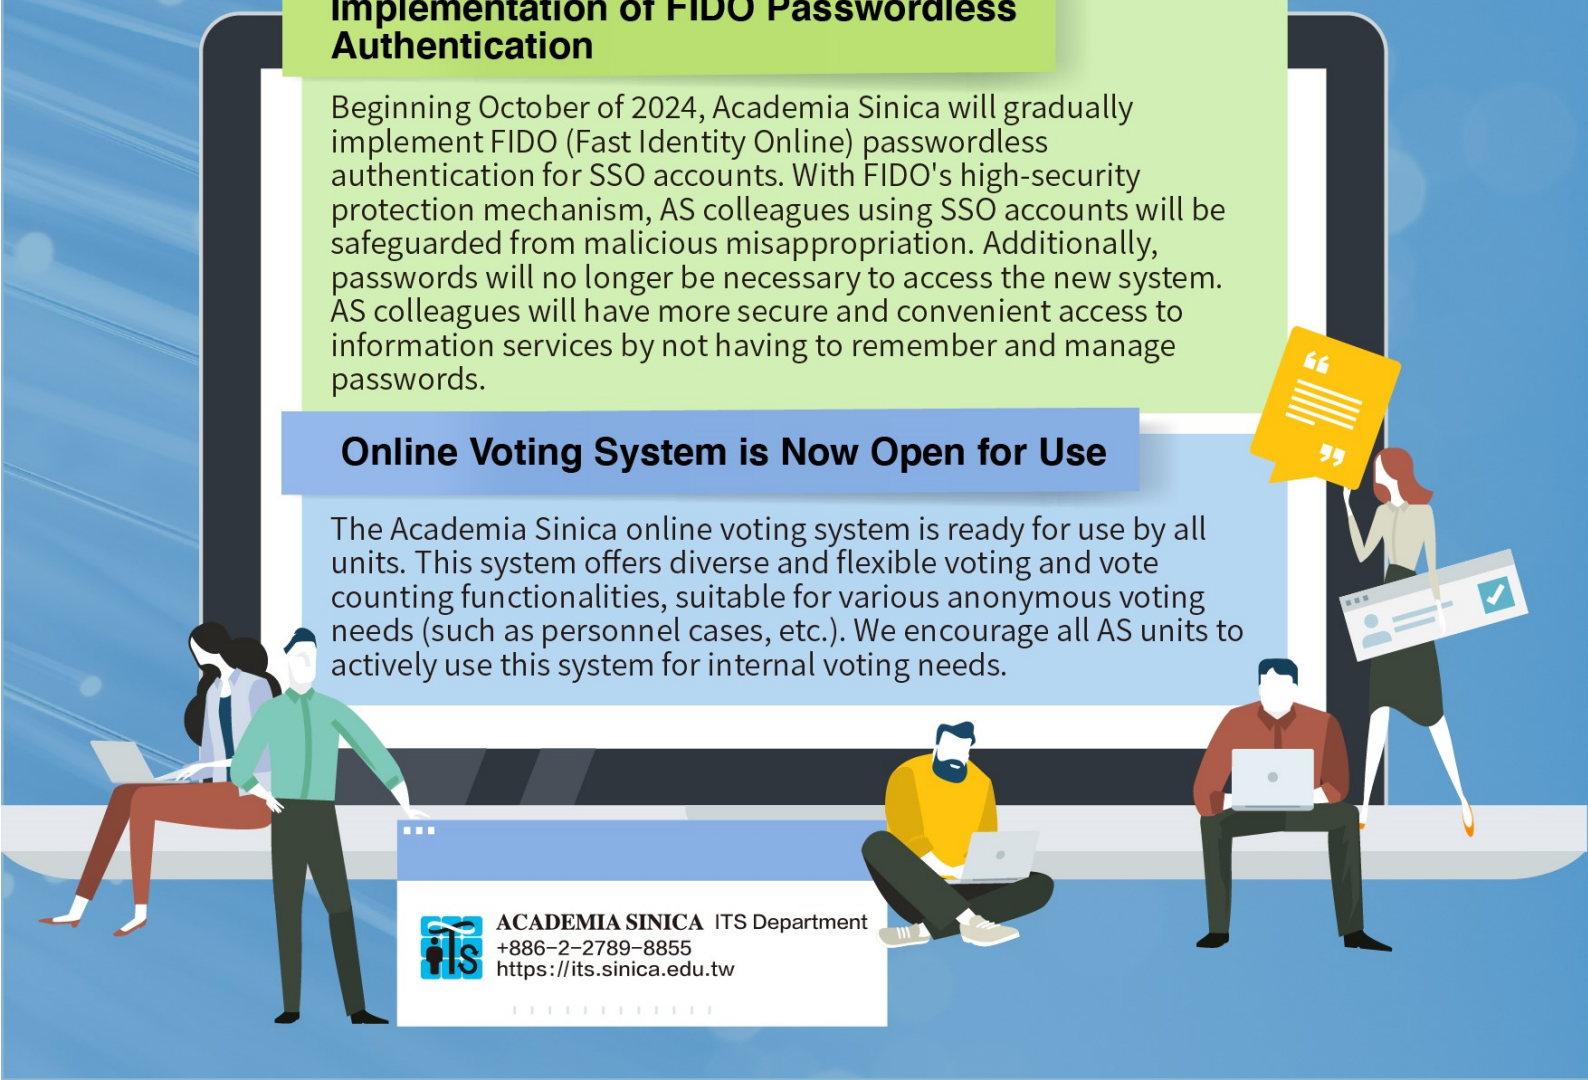

To meet the growing demands of AI training and large-scale data processing, the Academia Sinica Computing Service (ASCS) will expand its GPU resources in September of 2024. This expansion will provide users with enhanced computational power and improved computational efficiency and accuracy, making ASCS an ideal training ground for beginners in AI model training. Additionally, ASCS will introduce new features of resource management for users to query and monitor resource usage in real-time. By optimizing resource allocation, overall efficiency will be improved.

Implementation of FIDO Passwordless Authentication

Beginning October of 2024, Academia Sinica will gradually implement FIDO (Fast Identity Online) passwordless authentication for SSO accounts. With FIDO's high-security protection mechanism, AS colleagues using SSO accounts will be safeguarded from malicious misappropriation. Additionally, passwords will no longer be necessary to access the new system. AS colleagues will have more secure and convenient access to information services by not having to remember and manage passwords.

Online Voting System is Now Open for Use

The Academia Sinica online voting system is ready for use by all units. This system offers diverse and flexible voting and vote counting functionalities, suitable for various anonymous voting needs (such as personnel cases, etc.). We encourage all AS units to actively use this system for internal voting needs.
